simultaneously with it a successful all-round regional development of the islands. 563 648

The resources of the islands having a small areal extent are very limited though the forest and sea products are fairly rich to deserve special mention. The presence of a variety of valuable species of timber in these islands has led to their exploitation since the development of the Penal settlement. The important species of timber found in the Andaman forests are padauk, garjan etc. In the previous decades, the forest exploitation was never associated with a commensurate amount of forest regeneration. Such policies are being followed at present for saving the forest resources from ruthless exploitation without any adequate means of ensuring a perennial supply of timber by systematic regeneration. The recent colonisation scheme has invoked the enquiry for the clearance of the forests. Andaman forests being rich in timber and also being the only major revenue earning source of the islands should by no means be ruthlessly cleared for settlement. Not only it depletes the forest resources but also degenerates the soil—the soil erosion being the immediate victim after such clearance of forests. Considering the primary importance of the forest resources of the islands, it seems to be a plausible agreement that at least 50% of the land should be reserved under forest cover and a further curtailment from this percentage will undoubtedly lead to serious consequences of the soil simultaneously with a great decrease in the resources of the islands. 313

The sea products range from a wide variety of products from sea shells to sea fisheries. The collection of sea shells is in vogue from a fairly long time and the sea fisheries, mostly being confined to the coastal areas, is conducted by the fishermen and the tribal people for their own consumption. There is a good deal of possibility for furthering the development of marine fisheries on a commercial scale but the lack of enterprise and capital investment has not given rise to any appreciable development. The only two enterprises of the fisheries are those of Trochus and Turbo shells by the Japanese during 1930-36 and another enterprise by a business concern in 1947. Even the present catch from the coastal areas amount to only 300 lbs., a considerable lag from the demand within the islands. 226 228

The means of earning livelihood in the islands were hunting and collecting by the aboriginal population who have not even to-day learnt the techniques of domesticating plants and also animals except the Onges who have domesticated the dogs very recently. The penal settlement and the subsequent expansion of the administrative seat at Port Blair 222 224 231 563 241
